

What is claimed is:

506A1

1. A gas transfer machine comprising:
a pump rotor mounted on a rotatable shaft for
5 transferring a gas; and

a reluctance-type motor for rotating said
rotatable shaft about its own axis, said reluctance-type
motor comprising a stator, a motor rotor surrounded by said
stator, and a shield member isolating said stator from said
10 motor rotor, said motor rotor being directly coupled to said
rotatable shaft and having a plurality of magnetic salient
poles.

2. A gas transfer machine according to claim 1,
15 wherein said shield member comprises a molded body of
synthetic resin having a surface positioned radially
inwardly of an inner circumferential surface of said stator,
said stator being embedded in said molded body of synthetic
resin.

20 3. A gas transfer machine according to claim 1,
wherein said shield member comprises a can of synthetic
resin or nonconductive material.

25 4. A gas transfer machine according to claim 1,
wherein said motor rotor has a plurality of permanent
magnets disposed respectively in said magnetic salient
poles.

A1
could

5. A gas transfer machine according to claim 1,
wherein said motor rotor is made of permalloy.
